The HTSP I-Kit

Purpose:

 To help program managers use social and behavior change communication (SBCC) to include AMA and HP pregnancy topics in their existing or planned FP or MCH programs.

Contents:

- Program Manager's Guide
- Ten adaptable SBCC tools

Program Manager's Guide

Step 1: Review the AMA and HP evidence

Step 2: Use SBCC approaches in project strategy design:

identifying primary and secondary audiences

developing a positioning concept

drafting key AMA/HP messages

Step 3: Integrate AMA and HP into your FP and MCH program;

and develop an action plan for roll out

Step 4: Review and adapt AMA and HP communication tools

Step 5: Prepare to monitor and evaluate

SBCC Tools

Socio-Ecological Level	Communication Tool
Individual and Family & Peer	Client brochure
Community	 Guide for Working with Community- Based Groups
Social and Structural	 Counseling Guide for Providers Provider Reminder Poster Counseling Guide for CHWs Guide for Researchers Guide for Journalists Infographics for Health Priority Decision-Makers

Communication Tools

Tool **Client Brochure** What It Is: A pamphlet with key information on AMA and HP pregnancies and cues for behavior (Less conservative change. The pamphlets include an AMA and HP self-assessment and modern FP method information. audience version -Annex D – and More Who It Is for: conservative audience Women who are in their 30s or whose next birth would be their fifth – women at risk for version – Annex E) AMA and HP. Women who are just starting to plan their families, but may not be aware of AMA and HP pregnancy risks. How to Use It: Give to/review with women during FP counseling sessions, at health service delivery sites and pharmacies, women's group meetings, community-based events, CHW

outreach activities, etc.

Families who practice modern family planning can stay healthy and happy!

Client Brochure (inside)

Answer these questions to see if a modern family planning method is right for you.

Initial assessment

- ☐ Do you want to have a baby in the next 18 months?
- ☐ Are you 35 or older?
- ☐ Have you had at least five births?

If you said yes to two or more of the questions above, you and your future baby are at greater risk of a complicated pregnancy or birth. Now answer the following question:

In-depth assessment

Have you ever suffered from the following conditions during a previous pregnancy or delivery?

- \square High blood pressure (hypertension)?
- □ Problems with the placenta?□ Diabetes during pregnancy?
- ☐ Weakness due to low blood (anemia)?
- ☐ Surgery to help deliver your baby (Caesarean section)?
- ☐ Heavy bleeding after delivery (postpartum hemorrhage)?
- ☐ (Very) early delivery of your baby (pre-term delivery)?
- ☐ Delivered a baby who was dead (still birth)?

If you are 35 or older, or have already had at least five births, and you have experienced any of the problems listed, you should consider using a modern family planning method to avoid pregnancy to preserve your health and that of your children. A woman is considered of advanced maternal age (AMA) when she is age 35 or older. A woman is considered high parity (HP) when she has had five or more births (including stillbirths). Pregnancy in AMA and HP women carries an increased risk of diabetes, pre-term delivery, hypertension and other conditions that are dangerous to the mother and baby's health. If you are nearing 35, or have had five or more births, you should carefully consider how to manage or avoid health risks associated with pregnancy.

Talk with your partner about staying safe from the risks of advanced maternal age (AMA) and high-parity (HP) pregnancy.

Talk with a health care provider about your risk of unsafe AMA and HP pregnancies and using a modern family planning method to stay healthy.

Find out what methods are available in your health center, and which is right for you and your family.

Client Brochure (inside)

Family Planning Methods

Pill

- Effective short-acting method that must be taken every day, at the same time of day.
- Safe for women of any age, including women who have not yet had a baby.
- The mini-pill is safe for breastfeeding mothers with a baby older than six weeks.

Injectable

- Effective short-acting method that lasts two to three months.
- Safe for women of any age, including women who have not yet had a baby.
- Safe for breastfeeding mothers with a baby older than six weeks.

Implant

- Effective long-acting method that lasts three to five years.
- Safe for women of any age, including women who have not yet had a baby.
- Safe for breastfeeding mothers with a baby older than six weeks.

ILLE

- Effective long-acting method that lasts five to ten years.
- . Can use within 48 hours of childbirth.
- Safe for breastfeeding mothers.

As with all pharmaceutical products, contraceptive methods can have side effects. Contraceptive method side effects are rare or are often temporary or easy to manage. When choosing a method, make sure to discuss side effects with a health care provider. If you experience side effects, return to the health center to learn how to manage them or to choose a different method.

Male Condom

- Effective short-acting method that is used at the time of sex.
- · If used correctly, every time it:
- Prevents pregnancy.
- Prevents sexually transmitted infections (STIs), including HIV/AIDS.

Female Condom

- Effective short-acting method that is used at the time of sex.
- · If used correctly, every time it:
- Prevents pregnancy.
- Prevents sexually transmitted infections (STIs), including HIV/AIDS.
- Safe for breastfeeding mothers.

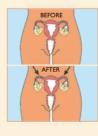

Exclusive Breastfeeding Method (LAM)

- Works by naturally delaying when a woman can become pregnant again.
- Effective post-partum method when women meet all three criteria:
- Are breastfeeding exclusively (day and night).
- Have an infant younger than six months old.
- Have not had menses return.

Standard Days Method

- A natural method that uses Cyclebeads® to track the menstrual cycle.
- Only for women with a regular menstrual cycle of 26 to 32 days.
- Safe for breastfeeding mothers whose menstrual cycle has returned, is regular and lasts 26 to 32 days.

Tubal Ligation

- Effective permanent method for women who do not wish to get pregnant again.
- Nothing to remember.

Vasectomy

- Effective permanent method for men who do not want their partner to get pregnant again.
- · Does not affect a man's sexual ability.

For more information about the methods that interest you, talk with a family planning or health care provider.

All for your health and a good life!

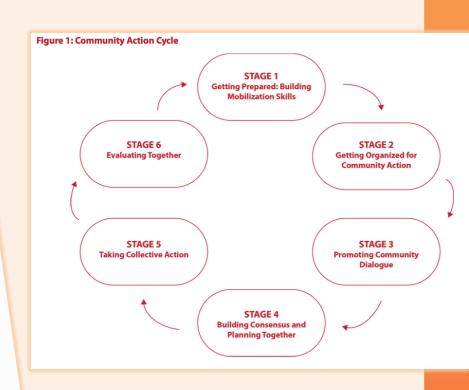

Guide for Working with Community-Based Groups

Addressing Advanced Maternal Age, High Parity and Healthy Timing and Spacing of Pregnancies

A Guide for Working with Community-Based Groups

Counseling Guides

Counseling and Assessment Guide for Community Health Workers: Talking to Women about AMA and HP Pregnancies

A woman is of advanced maternal age (AMA) when she is 35 years old or older. A woman is high parity (HP) A woman is or advanced maternal age (AMA) when she is 33 years old or older. A woman is high parity (HP) when she has had five or more births. Pregnancies in AMA or HP women can be risky for a mother and her

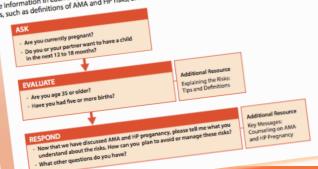

CHWs should use this counseling guide with:

- . Women in the years before they turn 35 or have a fifth birth
- Women who are already 35 or older and have already had five or more births
- Young women who are just starting to have children

 Couples, to help women and male partners understand the risks of AMA and HP pregnancies and how CHWs can also use this guide with: using modern family planning (FP) can prevent risky pregnancies

Use this guide during community outreach with a woman or couple. Use it to help you Ask your client about Use this guide during community outreach with a woman or couple. Use it to help you Ask your client about current or planned pregnancies, Evaluate her risk for HP and AMA pregnancy and Respond to questions and concerns about AMA, HP and FP.

Read through the entire guide at least two times before you use it with a client. The guide shows how to ask key questions during three counseling stages – Ask, Evaluate, Respond (see below diagram). How your client Ney questions during three counseling stages – PLSK, Evaluate, Respond (see below diagram). How your client asserts the key questions – for example, "Yes," "No," or "Not Sure" – will determine what information you talk answers the key questions – for example, 165, 140, or 100 Sure – will determine what information you tall about with your client. You should go through all counseling stages, but only need to talk with your client. about with your client, you should go through all counseling stages, but only need to talk with your client about the information in each step that matches her response and situation. The guide also has additional about the information in each step that matches her response and situation. The gresources, such as definitions of AMA and HP risks, and key counseling messages.

Reminder Poster

The Risks of an Advanced Maternal Age or High Parity Pregnancy are Dangerous for Mother and Baby.

Family Planning Can Prevent These Dangerous Pregnancies

Talk with Your Client

ASK your client:

- Are you currently pregnant?
- Do you/your partner want to have a child in the next 12 to 18 months?

EVALUATE

your client's situation:

- Is she advanced maternal age (AMA) or high parity (HP)? If she is age 35 or older, or has had five births, her next pregnancy may be dangerous.
- Regardless of her age or parity, does she know the risks of an AMA or HP pregnancy?
- Is she eligible for a modern Family Plannin (FP) method? If delaying a pregnancy for months or for years, which modern method would work for her?
- Explain to your client the dangers of AMA and HP pregnancies, and the importance of preventing them.

RESPOND

to questions &

- Let her know you ar there to help.
- If she is pregnant, counsel her on the benefits of antenatal care and schedule her for a follow-up visit. Discuss post-partum familia potanging portion.
- If she/her partner would like to have a child later, or would like to prevent future pregnancies, discuss the benefits of modern FP methods. Discuss the costs, effectiveness, safety, side effects and other aspects of methods that are right for her.
